

PCI Systems Release New Certification Module

PCI's Q.A. and Certification Modules are a part of their proven Prof.IT ERM application. These new Modules allow you to create internationally recognised specifications or customer specific specifications. As well as recording the results and images for each batch, your customer's requirements can be quickly and simply confirmed. The Prof.IT system also allows full traceability to be maintained.

Individual batches have their own test and image records and are automatically matched against your customer's requirement with both detailed analysis and easy to use traffic light indicators for Pass, Fail or Incomplete Pass – additional tests required. These tests are repeated and confirmed before despatch takes place; specifications include both chemical and physical tests with tolerances.

You can design your own certificate templates as well as store external certification images to be reproduced as needed.

The application provides you with a quicker response to your customer's inquiries and certification that fully meets both you and your customers needs.

'Prof.IT's Certification module has simplified specification control no end, automatically checking chemical and mechanical results of individual batches against industry standards or customer specific specs. Sales can now check stock against known specs at the click of a button and QA save hours generating automatic Certification for finished Goods, all to our own design.'

R. Bulmer Langley Alloys Ltd.

Accredited by Rolls Royce and Messier-Dowty. ISO9001/AS9100 Certified
